## STANDARD RXATIVES

### 0.172M Phosphate Buffer Stock (For 1 litre):

1. To 1000 ml double distilled $\mathrm{H}_{2} \mathrm{O}$, add $6.82 \mathrm{~g} \mathrm{NaH}_{2} \mathrm{PO}_{4}$. Stir until it dissolves (goes in quickly).
2. Add 17.32 g of $\mathrm{Na}_{2} \mathrm{HPO}_{4}$. Stir until dissolved (takes a bit longer).
3. Adjust pH to 7.2

## To make 0.137M phosphate wash buffer (iso-osmotic):

1. Dilute 4 parts of 0.172 M stock solution with 1 part distilled $\mathrm{H}_{2} \mathrm{O}$.

## 1\% Paraformaldehyde, 1\% Glutaraldehyde in 0.086M

 phosphate buffer1. $\mathrm{To} \approx 450 \mathrm{ml}$ distilled $\mathrm{H}_{2} \mathrm{O}$, add 10.0 g paraformaldehyde.
2. Heat solution on a hot plate to almost $80^{\circ} \mathrm{C}$.
3. Clear with $5-10$ drops of 1 N NaOH . Let cool.
4. Add 500 ml of 0.172 M phosphate buffer stock, pH 7.2 .
5. Add 14.3 ml of $70 \%$ glutaraldehyde.
6. Bring final volume up to 1000 ml .
7. Store in fridge at $4^{\circ} \mathrm{C}$.

## 4\% Osmium Tetroxide Stock Solution:

1. Using a hood and wearing gloves, break $\mathrm{OsO}_{4}$ ampoules in a thick sided bottle. DANGEROUS OXIDIZER: avoid any contact!!
2. Add double distilled $\mathrm{H}_{2} \mathrm{O}$, seal the lid of the bottle with parafilm and leave in the hood at room temperature for a day or two until crystals dissolve. Invert or swirl the bottle every few hours. Final solution will be a pale yellow.
3. Store in fridge at $4^{\circ} \mathrm{C}$. LABEL BOTTLE: CAUTION!!!
4. Over time the solution will start to turn from pale yellow to gray and ultimately to black. Only use when pale yellow.
5. Discard in properly labeled Toxic waste container.

For 25 ml , dissolve $1.0 \mathrm{~g} \mathrm{OsO}_{4}$ in 25 ml dd $\mathrm{H}_{2} \mathrm{O}$.

## $\underline{2 \% \mathrm{OsO}_{4}}$ in 0.086 M phosphate buffer

Combine equal volumes of $4 \% \mathrm{OsO}_{4}$ stock with 0.172 M phosphate buffer stock.

### 0.2M Sodium cacodylate stock buffer

For 500 ml , add 21.40 g of sodium cacodylate (CONTAINS As!!) to 500 ml dd $\mathrm{H}_{2} \mathrm{O}$

## 4\% paraformaldehyde in 0.1M sodium cacodylate buffer

For 1000ml:

1. Add 40.0 g paraformaldehyde to 500 ml of 0.2 M sodium cacodylate stock buffer.
2. On a hot plate in the hood, heat mixture until paraformaldehyde dissolves and solution clears. ( No NaOH is needed.)
3. Add about 400 ml of $\mathrm{dd} \mathrm{H}_{2} \mathrm{O}$.
4. Let solution cool.
5. Adjust pH to 7.4 using 1 N HCl .
6. Pour solution into a graduated cylinder and bring volume up to 1 liter.
7. Store in fridge at $4^{\circ} \mathrm{C}$.
